

The study of the characteristics of electroosmotic porous waste dehydration subject to the influence of the physical model of osmosis and voltage dynamics

Kazan Federal University, 420008, Kremlevskaya 18, Kazan, Russia

Abstract

© 2018, Institute of Advanced Scientific Research, Inc.. All rights reserved. The paper "The study of the characteristics of electroosmotic porous waste dehydration subject to the influence of the physical model of osmosis and voltage dynamics" written by the second-year graduate student of Penza State Technological University A.O. Kholudeneva deals with the aspects of the prospects for the introduction of electroosmotic dehydration of porous waste of papermaking are considered, and presents data on the structure and properties of the osprey, and features of electroosmotic dehydration.

Keywords

Dehydration, Electrodynamics, Electroosmosis, Joule heat temperature, Ospreys, Reducing humidity
